

Engineering

The Engineering Department provides professional engineering services to all phases of town government including:

- Capital Improvement Project Management
- Planning Board Site Plan and Subdivision Technical Review
- Construction Inspection
- Town Boundary Perambulation
- Utility Pipe Layers Licensing

The Engineering Department is an essential branch of the Town's Public Works Department. By providing the technical expertise the Town needs, Engineering ensures that town projects are carried out as efficiently and safely as possible.

By designing and overseeing Capital Projects Engineering confirms the Town's funds are being utilized properly and that the projects themselves are built accurately. This provides the Town with infrastructure that is not only effective but also durable.

Detailed information can be found below, regarding the construction standards used for public utilities, the Epping Road Traffic Study, or local road use.
